Entry Doors

Our Platinum Doors range brings together the best in modern and traditional door designs, complemented with a superior range of fixtures. Thermally broken options offer improved comfort, warmth and energy efficiency. Our range is constructed of aluminium, with the Element door adding bonded glass to the interior and exterior of the panel.

Most of our aluminium doors have a thermal option available (identified with a TH in the configurations section of each range). A thermal front door can contribute to improving the energy efficiency of a home. Our thermal doors are joined with a polyamide strip separating the internal and external aluminium elements. This reduces the effect of the outside temperature being transferred inside a home.
